106

WHAT IS CLAIMED IS:

1. A method of ex-vivo expanding stem and/or progenitor cells, while at the same time, substantially inhibiting differentiation of the stem and/or progenitor cells, the method comprising:

- (a) obtaining a population of cells comprising stem and/or progenitor cells;
- (b) seeding said stem and/or progenitor cells into a bioreactor, and
- (c) culturing said stem and/or progenitor cells ex-vivo in said bioreactor under conditions allowing for cell proliferation and, at the same time, culturing said cells under conditions selected from the group consisting of:
 - (i) conditions reducing expression and/or activity of CD38 in said cells;
- (ii) conditions reducing capacity of said cells in responding to signaling pathways involving CD38 in said cells;
- (iii) conditions reducing capacity of said cells in responding to retinoic acid, retinoids and/or Vitamin D in said cells;
- (iv) conditions reducing capacity of said cells in responding to signaling pathways involving the retinoic acid receptor, the retinoid X receptor and/or the Vitamin D receptor in said cells;
- (v) conditions reducing capacity of said cells in responding to signaling pathways involving PI 3-kinase;
- (vi) conditions wherein said cells are cultured in the presence of nicotinamide, a nicotinamide analog, a nicotinamide or a nicotinamide analog derivative or a nicotinamide or a nicotinamide analog metabolite;
- (vii) conditions wherein said cells are cultured in the presence of a copper chelator;
- (viii) conditions wherein said cells are cultured in the presence of a copper chelate;
- (ix) conditions wherein said cells are cultured in the presence of a PI 3-kinase inhibitor;

thereby expanding the stem and/or progenitor cells while at the same time, substantially inhibiting differentiation of the stem and/or progenitor cells ex-vivo.

- 2. The method of claim 1, wherein said stem and/or progenitor cells are derived from a source selected from the group consisting of hematopoietic cells, umbilical cord blood cells, G-CSF mobilized peripheral blood cells, bone marrow cells, hepatic cells, pancreatic cells, intestinal cells, neural cells, oligodendrocyte cells, keratinocytes, skin cells, muscle cells, bone cells, chondrocytes and stroma cells.
- 3. The method of claim 1, further comprising the step of selecting a population of stem cells enriched for hematopoietic stem cells.
 - 4. The method of claim 3, wherein said selection is affected via CD34.
- 5. The method of claim 1, further comprising the step of selecting a population of stem cells enriched for early hematopoietic stem/progenitor cells.
 - 6. The method of claim 5, wherein said selection is affected via CD133.
- 7. The method of claim 1, wherein step (b) is followed by a step comprising selection of stem and/or progenitor cells.
- 8. The method of claim 7, wherein said selection is affected via CD 133 or CD 34.
- 9. The method of claim 1, wherein said providing said conditions for cell proliferation is effected by providing the cells with nutrients and cytokines.
- 10. The method of claim 9, wherein said cytokines are selected from the group consisting of early acting cytokines and late acting cytokines.
- 11. The method of claim 10, wherein said early acting cytokines are selected from the group consisting of stem cell factor, FLT3 ligand, interleukin-6, thrombopoietin and interleukin-3.

- 12. The method of claim 10, wherein said late acting cytokines are selected from the group consisting of granulocyte colony stimulating factor, granulocyte/macrophage colony stimulating factor and erythropoietin.
- 13. The method of claim 10, wherein said late acting cytokine is granulocyte colony stimulating factor.
- 14. The method of claim 1, wherein said stem and/or progenitor cells are genetically modified cells.
- 15. The method of claim 1, wherein said inhibitors of PI 3-kinase are wortmannin and/or LY294002.
- 16. The method of claim 1, wherein said bioreactor is selected from the group consisting of a static bioreactor, a stirred flask bioreactor, a rotating wall vessel bioreactor, a hollow fiber bioreactor and a direct perfusion bioreactor.
- 17. The method of claim 16, wherein said static bioreactor is selected from the group consisting of well plates, tissue-culture flasks and gas-permeable culture bags.
- 18. The method of claim 1, wherein said culturing said cells of step (c) is effected in suspension culture.
- 19. The method of claim 1, wherein said culturing said cells of step (c) is effected on a porous scaffold.
- 20. The method of claim 19, wherein said porous scaffold is selected from the group consisting of poly (glycolic acid), poly (DL-lactic-co-glycolic acid), alginate, fibronectin, laminin, collagen, hyaluronic acid, Polyhydroxyalkanoate, poly 4 hydroxybutirate (P4HB) and polygluconic acid (PGA).

- 21. The method of claim 19, wherein said porous scaffold comprises a hydrogel.
- 22. The method of claim 1, wherein said seeding is static seeding or perfusion seeding.
- 23. The method of claim 1, wherein said culturing of said cells of steps (b) and (c) is effected without stromal cells or a feeder layer.
- 24. A conditioned medium isolated from the expanded stem and/or progenitor cell culture of claims 1-23.
- 25. A method of preparing a stem and/or progenitor cell conditioned medium, the method comprising:
- (a) establishing a stem and/or progenitor cells culture in a bioreactor according to any of claims 1-23, thereby expanding the stem and/or progenitor cells while at the same time, substantially inhibiting differentiation of the stem and/or progenitor cells ex-vivo; and
- (b) when a desired stem and/or progenitor cell density has been achieved, collecting medium from said bioreactor, thereby obtaining the stem and/or progenitor cell conditioned medium.
 - 26. The stem and/or progenitor cell conditioned medium of claim 25.
- 27. A method of transplanting ex-vivo expanded stem and/or progenitor cells into a recipient, the method comprising:
 - (a) obtaining a population of cells comprising stem and/or progenitor cells;
 - (b) seeding said stem and/or progenitor cells into a bioreactor, and
- (c) culturing said stem and/or progenitor cells ex-vivo in said bioreactor under conditions allowing for cell proliferation and, at the same time, culturing said cells under conditions selected from the group consisting of:
 - (i) conditions reducing expression and/or activity of CD38 in said cells;

- (ii) conditions reducing capacity of said cells in responding to signaling pathways involving CD38 in said cells;
- (iii) conditions reducing capacity of said cells in responding to retinoic acid, retinoids and/or Vitamin D in said cells;
- (iv) conditions reducing capacity of said cells in responding to signaling pathways involving the retinoic acid receptor, the retinoid X receptor and/or the Vitamin D receptor in said cells;
- (v) conditions reducing capacity of said cells in responding to signaling pathways involving PI 3-kinase;
- (vi) conditions wherein said cells are cultured in the presence of nicotinamide, a nicotinamide analog, a nicotinamide or a nicotinamide analog derivative or a nicotinamide or a nicotinamide analog metabolite;
- (vii) conditions wherein said cells are cultured in the presence of a copper chelator;
- (viii) conditions wherein said cells are cultured in the presence of a copper chelate;
- (ix) conditions wherein said cells are cultured in the presence of a PI 3-kinase inhibitor; and
- (d) recovering said expanded stem and/or progenitor cells from said bioreactor, and
- (e) transplanting into said recipient said ex-vivo expanded stem and/or progenitor cells produced in steps (b)- (d).
- 28. The method of claim 27, wherein said stem and/or progenitor cells are derived from a source selected from the group consisting of hematopoietic cells, umbilical cord blood cells, G-CSF mobilized peripheral blood cells, bone marrow cells, hepatic cells, pancreatic cells, intestinal cells, neural cells, oligodendrocyte cells, skin cells, keratinocytes, muscle cells, bone cells, chondrocytes and stroma cells.
- 29. The method of claim 27, further comprising the step of selecting a population of stem cells enriched for hematopoietic stem cells.
 - 30. The method of claim 29, wherein said selection is affected via CD34.

- 31. The method of claim 27, further comprising the step of selecting a population of stem cells enriched for early hematopoietic stem/progenitor cells.
 - 32. The method of claim 31, wherein said selection is affected via CD133.
- 33. The method of claim 27, wherein step (c) is followed by a step comprising selection of stem and/or progenitor cells.
- 34. The method of claim 33, wherein said selection is affected via CD 133 or CD 34.
- 35. The method of claim 27, wherein said stem and/or progenitor cells of step (b) are obtained from said recipient.
- 36. The method of claim 27, wherein said providing said conditions for cell proliferation is effected by providing the cells with nutrients and cytokines.
- 37. The method of claim 36, wherein said cytokines are selected from the group consisting of early acting cytokines and late acting cytokines.
- 38. The method of claim 37, wherein said early acting cytokines are selected from the group consisting of stem cell factor, FLT3 ligand, interleukin-6, thrombopoietin and interleukin-3.
- 39. The method of claim 37, wherein said late acting cytokines are selected from the group consisting of granulocyte colony stimulating factor, granulocyte/macrophage colony stimulating factor and erythropoietin.
- 40. The method of claim 39, wherein said late acting cytokine is granulocyte colony stimulating factor.
- 41. The method of claim 27, wherein said stem and/or progenitor cells are genetically modified cells.

- 42. The method of claim 27, wherein said inhibitors of PI 3-kinase are wortmannin and/or LY294002.
- 43. The method of claim 27, wherein said bioreactor is selected from the group consisting of a static bioreactor, a stirred flask bioreactor, a rotating wall vessel bioreactor, a hollow fiber bioreactor and a direct perfusion bioreactor.
- 44. The method of claim 43, wherein said static bioreactor is selected from the group consisting of well plates, tissue-culture flasks and gas-permeable culture bags.
- 45. The method of claim 27, wherein said culturing said cells of step (c) is effected in suspension culture.
- 46. The method of claim 27, wherein said culturing said cells of step (c) is effected on a porous scaffold.
- 47. The method of claim 46, wherein said porous scaffold is selected from the group consisting of poly (glycolic acid), poly (DL-lactic-co-glycolic acid), alginate, fibronectin, laminin, collagen, hyaluronic acid, Polyhydroxyalkanoate, poly 4 hydroxybutirate (P4HB) and polygluconic acid (PGA).
- 48. The method of claim 41, wherein said porous scaffold comprises a hydrogel.
- 49. The method of claim 27, wherein said seeding is static seeding or perfusion seeding.
- 50. The method of claim 27, wherein said culturing of said cells of steps (b) and (c) is effected without stromal cells or a feeder layer.
